

Pediatric & Adult Neuropsychologist

Dr. Laurie CESTNICK

Dr. Laurie Cestnick has almost 20 years experience assessing & treating developmental and acquired conditions (ages 3 & up). She completed her Ph.D. in psychology at Macquarie University in Australia, is trained in both research (radiology at MGH, Harvard University and MIT) and clinical neuropsychology (Macquarie, Australia; Weaver Center, and Hollowell Center, USA), and has taught/trained students/clinicians (Harvard and Tufts Universities).

Her research has examined learning and neurodevelopmental phenomenon such as dyslexia, Autism, and ADHD, via behavioral and neuroimaging studies (fMRI and MEG), and she works with these and additional cohorts clinically - such as those with traumatic brain injury. She has been instrumental in evolving the reading and dyslexia models that exist today and developed theories of visual attention representation in the brain. These experiences afford comprehensive and advanced assessments especially for people with learning disorders.

* Genuine * caring * driven to give the best possible service
* disarming * approachable * hardworking * makes what could be a daunting experience actually fun, enjoyable, and informative.
